

Anilox Roll, Ink Chamber & Print Plate Cleaner

QUICK FACTS

What is InKlean?

InKlean is an organic, non caustic ink remover that is extremely effective while safe to use and designed to work with both water based and solvent ink types.

InKlean liquefies dried ink rapidly without any corrosive or hazardous effects on your operators or equipment. *Many competing cleaners require a high PH to work and can cause metal corrosion, skin burns and print plate damage.* InKlean, on the other hand, utilizes specifically targeted solvents and environmentally safe ingredients and has a concentrated PH of only 9.9. This means it is never corrosive in either concentrated or diluted form and still provides fast and thorough cleaning of anilox rolls, ink chambers, print plates and anywhere ink buildup is found in your plant.

How do I use InKlean?

Manual use in Buckets and Foamers:

- Mount CST-supplied diluting pump over your tote or drum. CST will set the pump to 1:30 dilution rate.
- Open the valve on the pump to fill buckets and foamers with pre-diluted InKlean.
- Circulate the buckets through the ink system for 5 to 10 minutes between orders and whenever you are doing a clean-up.
- Foam onto print plates, ink pumps and other areas where ink builds up. Let it work for 1 to 2 minutes and rinse with water.

Use in a Central Distribution System:

- CST connects diluting pump to every machine center in the plant, from one central location.
- CST installs dedicated wash stations, including foaming guns and bucket drop valves at each printing machine.
- Wash stations are connected to pre-diluted and ready to use InKlean for ease of operator use.
- Operators can quickly and easily fill buckets with diluted InKlean for ink system cleaning.
- External machine and print plate cleaning is fast and easy with foaming guns mounted on retractable hose reels.

What is the cost of InKlean?

- 55-Gallon drum for manual use: \$1,100 per drum
Cost when diluted at 1:30: \$0.67 per gallon
- 265-Gallon tote for centrally distributed use: \$4,200 per tote
Cost when diluted at 1:50: \$0.31 per gallon

Note: InKlean is Highly Concentrated, so it's important to calculate the diluted cost. Contact us for a direct comparison to your current product usage and costs.
